Psychosis is characterized by a number of different challenges- including the positive and negative symptoms, as well as the cognitive challenges.

In this talk, Dr Menon looks at some of the biological factors (and particularly the role of dopamine). He also looks at some of the psychological treatments for psychosis (such as cognitive behaviour therapy and metacognitive training).

Dr. Menon completed his Ph.D. in Psychology at the University of Cambridge, UK. He completed a postdoctoral fellowship at the University of Toronto/ Centre for Addiction & Mental Health and stayed on as a Clinician Scientist there prior to his move to UBC. He is currently a Psychologist with Vancouver Coastal Health, and based at the BC Psychosis Program and the Mood Disorders Program at UBC Hospital. Dr. Menon is Co-PI in the Cognitive Neuroscience of Schizophrenia (CNos) Lab, along with his longtime collaborator, Prof. Todd Woodward.
